POSITION STATEMENT – NETWORK DEVICES FUNDAMENTAL

1.   The Australasian Certification Authority (ACA) recognises the need for evaluated devices that are suitable for the use cases identified in the *Network Device Fundamentals Essential Security Requirements* (ESR) version 0.2 dated 1 May 2014. The ACA believes that the ESR appropriately scopes the security functionality of such devices.

2.   The ACA reserves the right to revisit its position at any stage throughout the development of the Network Device Fundamentals collaborative Protection Profile (cPP).

3.   Should the resulting cPP meet the intent of the ESR the ACA will recommend the cPP for endorsement to conduct product evaluations within the Australasian Information Security Evaluation Program.
