

Assurance Continuity Maintenance Report

BSI-DSZ-CC-0918-V6-2024-MA-03

CONEXA 3.0, Version 1.5

Software: v3.80.0-cc

Hardware: HW V01.00 & V01.01

from

Theben Smart Energy GmbH

SOGIS
Recognition Agreement
for components up to
EAL 4

The IT product identified in this report was assessed according to the procedures on Assurance Continuity [1] and the developer's Impact Analysis Report (IAR). The baseline for this assessment was the Certification Report, the Security Target and the Evaluation Technical Report of the product certified by the Federal Office for Information Security (BSI) under BSI-DSZ-CC-0918-V6-2024.

The certified product itself did not change. The changes are related to an update of the user guidance and to the certified scope of the delivery procedures.

Considering the nature of the change leads to the conclusion that it is classified as a minor change and that certificate maintenance is the correct path to continuity of assurance.

Common Criteria
Recognition Arrangement
recognition for components
up to EAL 2 and ALC_FLR
only

The resistance to attacks has not been re-assessed in the course of this maintenance process. Therefore, the assurance statement as outlined in the Certification Report BSI-DSZ-CC-0918-V6-2024 dated 08 February 2024 is of relevance and has to be considered when using the product. Details can be found on the following pages.

This report is an addendum to the Certification Report BSI-DSZ-CC-0918-V6-2024.

Bonn, 29 January 2025

The Federal Office for Information Security

Assessment

The IT product identified in this report was assessed according to the procedures on Assurance Continuity [1] and the Impact Analysis Report (IAR) [2]. The baseline for this assessment was the Certification Report of the certified product (Target of Evaluation, TOE) [3], its Security Target and the Evaluation Technical Report as outlined in [3].

The vendor for the CONEXA 3.0, Version 1.5, Theben Smart Energy GmbH, submitted an IAR [2] to the BSI for approval. The IAR is intended to satisfy the requirements according to the procedures on Assurance Continuity [1]. In accordance with those requirements, the IAR describes (i) the changes made to the certified TOE, (ii) the evidence updated as a result of the changes and (iii) the security impact of the changes.

The certified product itself did not change.

The Security Target [4] was editorially updated.

The changes are related to an update of the user guidance [5] and to the certified scope of the delivery procedures. In the user guidance [5], a reference was removed. For the certified scope of the delivery procedures, the assurance component ALC_DEL.1 (ALC_DEL.1.1D, ALC_DEL.1.1C) has been refined in the ST [4] to only cover the delivery of the TOE from the manufacturer to the MPO (metering point operator), who is the customer of the developer and the recipient of the TOE.

The further storage and transport of the TOE to the installation environment falls into the responsibility of the MPO and is out of scope of the CC certification.

A related assumption and corresponding security objective for the TOE environment have been added to the ST [4].

Conclusion

The maintained change is at the level of guidance documentation and at the level of the delivery procedures. The change has no effect on product assurance but the updated guidance documentation [5] as well as [6] and [7] with their appendix [8] have to be followed.

Considering the nature of the change leads to the conclusion that it is classified as a minor change and that certificate maintenance is the correct path to continuity of assurance.

The resistance to attacks has not been re-assessed in the course of this maintenance process. Therefore, the assurance statement as outlined in the Certification Report BSI-DSZ-CC-0918-V6-2024 dated 08 February 2024 is of relevance and has to be considered when using the product.

Obligations and notes for the usage of the product:

All aspects of assumptions, threats and policies as outlined in the Security Target not covered by the TOE itself need to be fulfilled by the operational environment of the TOE.

The customer or user of the product shall consider the results of the certification within his system risk management process. In order for the evolution of attack methods and

techniques to be covered, he should define the period of time until a re-assessment for the TOE is required and thus requested from the sponsor of the certificate.

Additional Note: The strength of the cryptographic algorithms was not rated in the course of the product certification and this maintenance procedure (see BSIG¹ Section 9, Para. 4, Clause 2).

For details on results of the evaluation of cryptographic aspects refer to the Certification Report [3] chapter 9.2.

This report is an addendum to the Certification Report [3].
