Version: 0.5
Date: 17-02-2012
Pagination: 1 to 1

1   Introduction

Symantec^{TM} Corporation has submitted (via EWA-Canada) the Impact Analysis Report (IAR) for Symantec^{TM} Messaging Gateway version 9.5.2 (e.g. hereafter referred to as Symantec^{TM} Messaging Gateway), satisfying the requirements outlined in Assurance Continuity: CCRA Requirements, v1.9, July 2011. In accordance with those requirements, the IAR describes the changes made to Symantec^{TM} Messaging Gateway (the maintained Target of Evaluation), the evidence updated as a result of the changes and the security impact of the changes.

2   Description of changes to the TOE

The following characterizes the changes implemented in Symantec^{TM} Messaging Gateway. For each change, it was verified that there were no required changes to the security functional requirements in the ST, and thorough functional and regression testing was conducted by the developer to ensure that the assurance in the Target of Evaluation (TOE) was maintained. The changes in Symantec^{TM} Messaging Gateway comprise bug fixes resulting from defects detected and resolved through the QA/test.

3   Affected developer evidence

Modifications to the product necessitated changes to a subset of the developer evidence that was previously submitted for the TOE. The set of affected developer evidence was identified in the IAR.

Modifications to the security target were made to reflect the new product versions.

4   Conclusions

All changes to the TOE were bug fixes. Through functional and regression testing of Symantec^{TM} Messaging Gateway, assurance gained in the original TOE certification was maintained. As all of the changes to the TOE have been classified as minor, it is the conclusion of the CB that the maintained TOE is appropriate for assurance continuity and re-evaluation is not required.
