CANADIAN CENTRE FOR CYBER SECURITY

COMMON CRITERIA CERTIFICATION REPORT

Dell PowerMax with PowerMaxOS 10 Solutions Enabler 10.0, and Unisphere for PowerMax 10.0

20 October 2023

599-LSS

Canada

FOREWORD

This certification report is an UNCLASSIFIED publication, issued under the authority of the Chief, Communications Security Establishment (CSE).

The Information Technology (IT) product identified in this certification report, and its associated certificate, has been evaluated at an approved testing laboratory established under the Canadian Centre for Cyber Security (a branch of CSE). This certification report, and its associated certificate, applies only to the identified version and release of the product in its evaluated configuration. The evaluation has been conducted in accordance with the provisions of the Canadian Common Criteria Program, and the conclusions of the testing laboratory in the evaluation report are consistent with the evidence adduced.

This report, and its associated certificate, are not an endorsement of the IT product by Canadian Centre for Cyber Security, or any other organization that recognizes or gives effect to this report, and its associated certificate, and no warranty for the IT product by the Canadian Centre for Cyber Security, or any other organization that recognizes or gives effect to this report, and its associated certificate, is either expressed or implied.

If your organization has identified a requirement for this certification report based on business needs and would like more detailed information, please contact:

Canadian Centre for Cyber Security
Contact Centre and Information Services
contact@cyber.gc.ca | 1-833-CYBER-88 (1-833-292-3788)

OVERVIEW

The Canadian Common Criteria Program provides a third-party evaluation service for determining the trustworthiness of Information Technology (IT) security products. Evaluations are performed by a commercial Common Criteria Testing Laboratory (CCTL) under the oversight of the Certification Body, which is managed by the Canadian Centre for Cyber Security.

A CCTL is a commercial facility that has been approved by the Certification Body to perform Common Criteria evaluations; a significant requirement for such approval is accreditation to the requirements of ISO/IEC 17025, the General Requirements for the Competence of Testing and Calibration Laboratories.

By awarding a Common Criteria certificate, the Certification Body asserts that the product complies with the security requirements specified in the associated security target. A security target is a requirements specification document that defines the scope of the evaluation activities. The consumer of certified IT products should review the security target, in addition to this certification report, to gain an understanding of any assumptions made during the evaluation, the IT product's intended environment, the evaluated security functionality, and the testing and analysis conducted by the CCTL.

The certification report, certificate of product evaluation and security target are posted to the Common Criteria portal (the official website of the International Common Criteria Program).

EXECUTIVE SUMMARY

Dell PowerMax with PowerMaxOS 10 Solutions Enabler 10.0, and Unisphere for PowerMax 10.0 (hereafter referred to as the Target of Evaluation, or TOE), from **Dell Technologies**, was the subject of this Common Criteria evaluation. A description of the TOE can be found in Section 1.2. The results of this evaluation demonstrate that the TOE meets the requirements of the conformance claim listed in Section 1.1 for the evaluated security functionality.

Lightship Security is the CCTL that conducted the evaluation. This evaluation was completed on **20 October 2023** and was carried out in accordance with the rules of the Canadian Common Criteria Program.

The scope of the evaluation is defined by the Security Target, which identifies assumptions made during the evaluation, the intended environment for the TOE, and the security functional/assurance requirements. Consumers are advised to verify that their operating environment is consistent with that specified in the security target, and to give due consideration to the comments, observations, and recommendations in this Certification Report.

The Canadian Centre for Cyber Security, as the Certification Body, declares that this evaluation meets all the conditions of the Arrangement on the Recognition of Common Criteria Certificates and that the product is listed on the Certified Products list (CPL) for the Canadian Common Criteria Program and the Common Criteria portal (the official website of the International Common Criteria Program).

1 IDENTIFICATION OF TARGET OF EVALUATION

The Target of Evaluation (TOE) is identified as follows:

Table 1: TOE Identification

TOE Name and Version	Dell PowerMax with PowerMaxOS 10 Solutions Enabler 10.0, and Unisphere for PowerMax 10.0
Developer	Dell Technologies

1.1 COMMON CRITERIA CONFORMANCE

The evaluation was conducted using the Common Methodology for Information Technology Security Evaluation, Version 3.1 Revision 5, for conformance to the Common Criteria for Information Technology Security Evaluation, Version 3.1 Revision 5.

The TOE claims the following conformance:

EAL 2+ (ALC_FLR.2)

1.2 TOE DESCRIPTION

The TOE is a hardware and software solution that provides a platform for large scale storage operations, managing large amounts of block storage. The TOE is managed using the Solutions Enabler Command Line Interface, or the Unisphere for PowerMax Graphical User Interface.

1.3 TOE ARCHITECTURE

A diagram of the TOE architecture is as follows:

Figure 1: TOE Architecture

2   SECURITY POLICY

The TOE implements and enforces policies pertaining to the following security functionality:

- Security Audit
- Cryptographic Operation
- User Data Protection
- Identification and Authentication
- Security Management
- Protection of the TSF
- Trusted Path/Channels

Complete details of the security functional requirements (SFRs) can be found in the Security Target (ST) referenced in section 8.2.

2.1   CRYPTOGRAPHIC FUNCTIONALITY

The following cryptographic implementations are used by the TOE and have been evaluated by the CAVP:

Table 2:   Cryptographic Implementation(s)

Cryptographic Algorithm	Certificate Number
AES-256-XTS	C1271, C1292

3   ASSUMPTIONS AND CLARIFICATION OF SCOPE

Consumers of the TOE should consider assumptions about usage and environmental settings as requirements for the product's installation and its operating environment. This will ensure the proper and secure operation of the TOE.

3.1   USAGE AND ENVIRONMENTAL ASSUMPTIONS

The following assumptions are made regarding the use and deployment of the TOE:

- The TOE will rely on the operating system in the environment for performing administrative user authentication for Solutions Enabler.
- The TOE will be located within controlled access facilities, which will prevent unauthorized physical and logical access.
- The authorized administrators are not careless, wilfully negligent, or hostile, are appropriately trained and will follow the instructions provided by the TOE documentation.

3.2   CLARIFICATION OF SCOPE

The following functions have not been evaluated:

- Multi-factor authentication
- End-to-end Efficient Encryption
- The REST API is not used in the evaluated configuration, nor does it support any TOE management functionality.
- Dell Secure Remote Service is not connected and not used in the evaluated configuration.

4 EVALUATED CONFIGURATION

The evaluated configuration for the TOE comprises:

TOE Software/Firmware	PowerMaxOS 10.0.1.2
	Unisphere for PowerMax 10.0.1.0 Build 5
	Solutions Enabler 10.0.1.1
TOE Hardware	PowerMax 2500, PowerMax 8500
Environmental Support	The TOE makes use of an administrative server to host the Solutions Enabler and Unisphere for PowerMax. Windows Server 2019 is the host OS used in the evaluated configuration.
	An administrator workstation is required to access and manage the TOE. Windows 10 is the host OS in the evaluated configuration.
	The TOE makes use of a SAN-connected block storage host device.

4.1 DOCUMENTATION

The following documents are provided to the consumer to assist in the configuration and installation of the TOE:

a) Dell Solutions Enabler 10.0.0, Installation and Configuration Guide, July 2023
https://dl.dell.com/content/manual47008612-dell-solutions-enabler-installation-andconfiguration-guide.pdf?language=en-us&ps=true

b) Dell Unisphere for PowerMax 10.0.0, Installation Guide, July 2022
https://dl.dell.com/content/manual34878027-dell-unisphere-for-powermax-10-0-0-installation-guide.pdf?language=en-us&ps=true

c) Dell Solutions Enabler, CLI Reference Guide, 10.0, July 2022
https://dl.dell.com/content/manual29232065-dell-solutions-enabler-cli-referenceguide-10-0-0.pdf?language=en-us

d) Dell PowerMax Family Security Configuration Guide, PowerMax OS, March 2023
https://dl.dell.com/content/manual37372498-dell-powermax-family-securityconfiguration-guide-powermaxos-10.pdf?language=en-us

e) Dell PowerMax Family Site Planning Guide, PowerMax 2500 and PowerMax 8500, October 2023
https://dl.dell.com/content/manual49083949-dell-powermax-family-site-planningguide-powermax-2500-and-powermax-8500.pdf?language=en-us&ps=true

f) Dell Unisphere for PowerMax Product Guide, 10.0.0, March 2023
https://dl.dell.com/content/manual34945916-dell-unisphere-for-powermax-10-0-0-product-guide.pdf?language=en-us&ps=true

g) Dell Unisphere for PowerMax, Online Help, 10.0.0. Note: Online Help is delivered to customers as a .zip file available at: https://supportkb.dell.com/attachment/ka06P000000Y27hQAC/Unisphere for PowerMax Online Help10.0.0_pkb_en_US_1.zip. Customers must download and extract the file, and then double-click the index.html file to start and view the Online Help application.

5 EVALUATION ANALYSIS ACTIVITIES

The evaluation analysis activities involved a structured evaluation of the TOE. Documentation and process dealing with Development, Guidance Documents, and Life-Cycle Support were evaluated.

5.1 DEVELOPMENT

The evaluators analyzed the documentation provided by the vendor; they determined that the design completely and accurately describes the TOE security functionality (TSF) interfaces and how the TSF implements the security functional requirements. The evaluators determined that the initialization process is secure, that the security functions are protected against tamper and bypass, and that security domains are maintained.

5.2 GUIDANCE DOCUMENTS

The evaluators examined the TOE preparative user guidance and operational user guidance and determined that it sufficiently and unambiguously describes how to securely transform the TOE into its evaluated configuration and how to use and administer the product. The evaluators examined and tested the preparative and operational guidance and determined that they are complete and sufficiently detailed to result in a secure configuration.

Section 4.1 provides details on the guidance documents.

5.3 LIFE-CYCLE SUPPORT

An analysis of the TOE configuration management system and associated documentation was performed. The evaluators found that the TOE configuration items were clearly marked.

The evaluators examined the delivery documentation and determined that it described all the procedures required to maintain the integrity of the TOE during distribution to the consumer.

6 TESTING ACTIVITIES

Testing consists of the following three steps: assessing developer tests, performing independent tests, and performing a vulnerability analysis.

6.1 ASSESSMENT OF DEVELOPER TESTS

The evaluators verified that the developer has met their testing responsibilities by examining their test evidence, and reviewing their test results, as documented in the Evaluation Test Report (ETR). The correspondence between the tests identified in the developer's test documentation and the functional specification was complete.

6.2 CONDUCT OF TESTING

The TOE was subjected to a comprehensive suite of formally documented, independent functional and penetration tests. The detailed testing activities, including configurations, procedures, test cases, expected results and observed results are documented in a separate Test Results document.

6.3 INDEPENDENT TESTING

During this evaluation, the evaluator developed independent functional & penetration tests by examining design and guidance documentation.

All testing was planned and documented to a sufficient level of detail to allow repeatability of the testing procedures and results. The following testing activities were performed:

a. Repeat of Developer's Tests: The evaluator repeated a subset of the developer's tests.
b. Interoperability Testing: The evaluator verified the interoperability between the TOE and a FIPS-validated implementation.
c. Unidentified User Access: The evaluator verified that attempts to perform security management functions with an account that is not associated with a security role on the TOE failed.
d. Audit Events: The evaluator verified that changes to time on the administrative server does not affect auditing events on the TOE.

6.3.1 INDEPENDENT TESTING RESULTS

The developer's tests and the independent tests yielded the expected results, providing assurance that the TOE behaves as specified in its ST and functional specification.

6.4 VULNERABILITY ANALYSIS

The vulnerability analysis focused on 4 flaw hypotheses.

- Public Vulnerability based (Type 1)
- Technical community sources (Type 2)
- Evaluation team generated (Type 3)
- Tool Generated (Type 4)

The evaluators conducted an independent review of all evaluation evidence, public domain vulnerability databases and technical community sources (Type 1 & 2).   Additionally, the evaluators used automated vulnerability scanning tools to discover potential network, platform, and application layer vulnerabilities (Type 4).   Based upon this review, the evaluators formulated flaw hypotheses (Type 3), which they used in their vulnerability analysis.

Type 1 & 2 searches were conducted on **19 September 2023** and included the following search terms:

PowerMax	PowerMax 2500, 8500	Unisphere (10.0)
Solutions Enabler (10.0)	Java (11.0.19.0.1 2023-04-18 LTS)	JRE 18 (18.9)
JSSE (11.0.19.0.1 2023-04-18 LTS)	Wildfly (24.0.1)	Log4j (1.2.16)
Samsung NVMe TCG Opal SSC SEDs PM1733 Series	TCG Opal	PM1733

Vulnerability searches were conducted using the following sources:

NIST National Vulnerability Database https://nvd.nist.gov	Dell Security Advisories and Notices https://www.dell.com/support/security/en-ca/
CISA – Known exploited vulnerabilities Catalog https://www.cisa.gov/known-exploited-vulnerabilities-catalog	

6.4.1 VULNERABILITY ANALYSIS RESULTS

The vulnerability analysis did not uncover any security relevant residual exploitable vulnerabilities in the intended operating environment.

7 RESULTS OF THE EVALUATION

The Information Technology (IT) product identified in this certification report, and its associated certificate, has been evaluated at an approved testing laboratory established under the Canadian Centre for Cyber Security. This certification report, and its associated certificate, apply only to the specific version and release of the product in its evaluated configuration.

This evaluation has provided the basis for the conformance claim documented in Table 1. The overall verdict for this evaluation is **PASS**. These results are supported by evidence in the ETR.

7.1 RECOMMENDATIONS/COMMENTS

It is recommended that all guidance outlined in Section 4.1 be followed to configure the TOE in the evaluated configuration.

8 SUPPORTING CONTENT

8.1 LIST OF ABBREVIATIONS

Term	Definition
CAVP	Cryptographic Algorithm Validation Program
CCTL	Common Criteria Testing Laboratory
CMVP	Cryptographic Module Validation Program
CSE	Communications Security Establishment
EAL	Evaluation Assurance Level
ETR	Evaluation Technical Report
IT	Information Technology
ITS	Information Technology Security
PP	Protection Profile
SFR	Security Functional Requirement
