Chapter 1 – Introduction

1.1: Purpose

This document is an addendum to the Certification Report (Ref [1]) that describes the relevant baseline evaluation of the Cisco Wireless Local Area Network and Wireless Intrusion Prevention System.

The purpose of this Maintenance Report is to describe the status of the assurance continuity activities undertaken by Cisco for the Cisco Wireless Local Area Network and Wireless Intrusion Prevention System against the requirements contained in the Assurance Continuity: CCRA Requirements (Ref [2]).

Cisco provided information about their assurance continuity activities in the form of an Impact Analysis Report (IAR). The IAR (Ref [3]) list the changes made to the certified TOE, the evidence updated as the result of the changes and the security impact of the changes.

This report should be read in conjunction with:

- a) The certified TOE's Certification Report (Ref [1]).
- b) The certified TOE's Security Target v1.1 (Ref [4]) which provides a full description of the security requirements and specifications that were used as the basis of the baseline evaluation.
- c) The new Security Target version 3.1 (Ref [5]) which includes the updated version numbers. The scope has not changed.

1.2: Identification

Table 1: Identification Information

Item	Identifier
Evaluation Scheme	Australasian Information Security Evaluation Program
Maintained TOE	Cisco Wireless LAN and Intrusion Prevention System v 7.0.240.0
Developer	Cisco Systems
Certified TOE	Cisco Wireless LAN and Intrusion Prevention System v 7.0.230.0
Security Target	Cisco Wireless Local Area Network (WLAN) Access System with Integrated Wireless Intrusion Prevention System (wIPS) Security Target Version: 1.1 March 2013
Updated Security Target	Cisco Wireless Local Area Network (WLAN) Access System with Integrated Wireless Intrusion Prevention System (wIPS) Security

	Target ,Version: 3.1, August 2013
Certificate Number	2012/81

Table 1 provides identification details for the evaluation. For details of all components included in the evaluated configuration refer to section 2.2 of the Security Target (Ref [4]).

Chapter 2 – IAR Summary

2.1: Description of changes

The Impact Analysis Report (IAR) indicated that the following minor changes have been made to the Cisco WLAN and wIPS.

Table 2: Model Changes

Certified version	Changed version
N/A	Access Point (AP) 1552

The overall impact of the hardware changes is minor. All the security functionality of the AP is implemented in software and there are no security-relevant software changes.

The guidance document has been updated to ensure a vulnerable feature, which is disabled by default, remains disabled.

2.2: Documentation Updated

The updated Security Target is 'Cisco Wireless Local Area Network (WLAN) Access System with Integrated Wireless Intrusion Prevention System (wIPS) Security Target Version: 3.1 August 2013' (Ref [5]).

The updated guidance document is 'Cisco Wireless Local Area Network (WLAN) Access System with Integrated Wireless Intrusion Prevention System (wIPS); Preparative Procedures and Operational User Guidance for the Common Criteria evaluated configuration of Cisco WLAN v7.0.240.0 at EAL4+; Version 3.0; March, 2013' (Ref [6]).

Chapter 3 - Assurance Continuity

3.1 Assurance Continuity Result

After consideration of the Impact Analysis Report (IAR) provided by Cisco Systems, Australasian Certification Authority (ACA) has determined that the proposed changes are minor. The ACA agrees that the resultant change in the TOE can be classified as minor and that certificate maintenance is the correct path to continuity of assurance. The ACA agrees that the original assurance result is maintained for Cisco Wireless Local Area Network (WLAN) Access System with Integrated Wireless Intrusion Prevention System (wIPS) version 7.0.240.0.
