1 Summary	3
2 Assessment	4
2.1 Introduction	4
2.2 Description of Changes	4
3 Conclusion	5
4 Bibliography	5

1 Summary

The IT product identified in this report was assessed according to the Assurance Continuity: CCRA Requirements [AC], the developer's Impact Analysis Report [IAR] and evaluator's IAR Analysis [IA]. The baseline for this assessment was the Certification Report [CR], the Security Target and the Evaluation Technical Report of the product certified by the NSCIB under NSCIB-CC-19-200716.

The changes to the certified product are related to a minor change in the software not impacting the security functionality of the certified product. The identification of the maintained product is modified to IDEal Drive DT V3.0 Applet code version 416304.

Consideration of the nature of the changes leads to the conclusion that they can be classified as minor changes and that certificate maintenance is the correct path to continuity of assurance.

The resistance to attacks has not been re-assessed in the course of this maintenance process. Therefore, the assurance as outlined in the Certification Report [CR] is maintained for the new version of the product.

This report is an addendum to the Certification Report NSCIB-CC-200716-CR [CR] and reproduction is authorised provided the report is reproduced in its entirety.

2 Assessment

2.1 Introduction

The IT product identified in this report was assessed according to the Assurance Continuity: CCRA Requirements [AC], the developer's Impact Analysis Report [IAR] and evaluator's IAR Analysis [IA]. The baseline for this assessment was the Certification Report [CR], the Security Target and the Evaluation Technical Report of the product certified by the NSCIB under NSCIB-CC-19-200716.

On 23 April 2019 IDEMIA submitted a request for assurance maintenance for the IDeal Drive DT V3.0 Applet code version 416304.

NSCIB has assessed the [IAR] according to the requirements outlined in the document Assurance Continuity: CCRA Requirements [AC].

In accordance with those requirements, the IAR describes (i) the changes made to the certified TOE, (ii) the evidence updated as a result of the changes and (iii) the security impact of the changes.

This is supported by the evaluator's IAR Analysis [IA].

2.2 Description of Changes

The TOE is a contact Tachograph card that implements the EU directive [EU-TACH]. The original evaluation of the TOE was conducted as a composite evaluation and used the results of the CC evaluation of the underlying JavaCard certified as described in [PL CERT].

The changes to the certified product as described in the [IAR] are only related to a small part of the software. This update to the software was classified by developer [IAR] and evaluator [IA] as minor changes with no impact on security.

Configuration Management procedures required a change in the product identifier. Therefore the name was modified to IDeal Drive DT V3.0 Applet code version 416304. An update of the guidance documentation was also needed.

The configuration list for the TOE has been updated as a result of the changes to include the updated Security Target [ST].

3 Conclusion

Consideration of the nature of the changes leads to the conclusion that they can be classified as minor changes and that certificate maintenance is the correct path to continuity of assurance.

The resistance to attacks has not been re-assessed in the course of this maintenance process. Therefore, the assurance as outlined in the Certification Report [CR] is maintained for this version of the product.
