2. Conduct and Result of Assurance Continuity by the Certification Body

2.1 Overview of Assurance Continuity Conducted

Application for the assurance continuity was accepted on 2008-10-21 and concluded with completion of the Report for Assurance Continuity. The Certification Body received the IAR necessary for assurance continuity provided by developer, and examined the impacts to changed TOE.

2.2 Conduct of Certification

The following verification was conducted based on the IAR submitted by the developer during certification process in order to confirm that there is no impact to the assurance of the changed TOE.

a. The developer evidence of the changed TOE shall be appropriate;
b. The process and result of impact analysis to the changed TOE shall be appropriate;
c. Appropriate tests shall be conducted.

3. Conclusion

3.1 Certification Result

The Certification Body verified the submitted IAR and confirmed that the changed TOE satisfies the EAL3 assurance requirements of the certified TOE, and also confirmed that there is not any impact to the assurance of the changed TOE.
Furthermore it confirming the result that person in development division tested regression test with using bizhub PRO C6500. This machine with loading TOE being changed is difference about portion of hardware against machine with loading current TOE, but its difference is no affect for action and function of machine, so Certification Body confirmed regression test is sufficient for test by testing only with using bizhub PRO C6500.
