

CCEVS APPROVED ASSURANCE CONTINUITY MAINTENANCE REPORT

ASSURANCE CONTINUITY MAINTENANCE REPORT FOR

Innovation FDRERASE Version 5.4 Level 70

Maintenance Report Number: CCEVS-VR-05-0109a

Date of Activity: 23 January 2007

References: Common Criteria document CCIMB-2004-02-009 "Assurance Continuity: CCRA Requirements", version 1.0, February 2004;

Innovation Data Processing, FDRERASE Impact Analysis Report (IARERS 1.0), 01 September 2006

Documentation Updated: Innovation Data Processing, FDRERASE Security Target, Version 1.0, 1 July 2005

Innovation Data Processing, FDRERASE Administrator and User Guides

Assurance Continuity Maintenance Report:

The vendor for FDRERASE, Innovation Data Processing, submitted an Impact Analysis Report (IAR) to CCEVS for approval on 20 November 2006. The IAR is intended to satisfy requirements outlined in Common Criteria document CCIMB-2004-02-009, "Assurance Continuity: CCRA Requirements", version 1.0, February 2004. In accordance with those requirements, the IAR describes the changes made to the certified TOE, the evidence updated as a result of the changes and the security impact of the changes.

Security Relevant Changes:

The vendor has made three changes to the source code: one is in response to an update to the underlying IBM OS (which now allows it to be run on IBM z/OS 1.8); one is to correct a possible error during an optional VTOC rebuild option; and the third is to permit writing a new volume label. All three of these changes are at a much finer level of internal detail than was analyzed during the original EAL2 evaluation. Consequently, the only changes made to the ST are the identification of the TOE and of the underlying platform.

Conclusion:

Because these changes are all outside the scope of analysis of the original evaluation, they are best classified as minor changes. Therefore, CCEVS agrees that the assurance is maintained for this version of the product.
