

## **ASSURANCE CONTINUITY MAINTENANCE REPORT FOR FireEye CM Series Appliances**

---

### **Maintenance Update of FireEye CM Series Appliances**

**Maintenance Report Number:** CCEVS-VR-VID10837-2019

**Date of Activity:** 15 August 2019

#### **References:**

- Common Criteria Evaluation and Validation Scheme Publication #6, Assurance Continuity: Guidance for Maintenance and Re-evaluation, version 2.0, 8 September 2008;
- FireEye CM Series Impact Analysis Report For Common Criteria Assurance Maintenance, Version 1.0, August 15, 2019
- collaborative Protection Profile for Network Devices, Version 1.0, 27-Feb-2015

#### **Documentation reported as being updated:**

- FireEye CM Series Appliances, Version 1.4, July 2019

#### **Assurance Continuity Maintenance Report:**

FireEye, Inc., submitted an Impact Analysis Report (IAR) to Common Criteria Evaluation Validation Scheme (CCEVS) for approval on August 15, 2019. The IAR is intended to satisfy requirements outlined in Common Criteria Evaluation and Validation Scheme Publication #6, Assurance Continuity: Guidance for Maintenance and Re-evaluation, version 2.0. In accordance with those requirements, the IAR describes the changes made to the certified TOE, the evidence updated because of the changes, and the security impact of the changes.

The IAR identified no hardware and no software changes to the TOE. The only update for this IAR is to correct typographical errors in the ST related to the disk space associated with several of the appliances.

The evaluation evidence consists of the Security Target and the Impact Analysis Report. The Security Target was revised to indicate that both the CM 4500 and CM 7500 appliances are configured with 4 x 4TB of hard drive disk space and the CM 9500 appliance is configured with 8 x 4TB of hard drive disk space.

## CCEVS APPROVED ASSURANCE CONTINUITY MAINTENANCE REPORT

The evaluation was done against the collaborative Protection Profile for Network Devices and the ST referenced validated FIPS certificates. No changes were made in the processor, so no modifications were required in any of the valid NIST certificates.

### **Changes to TOE:**

The only changes to the TOE were to correct the configured hard disk space associated with each of the evaluated models in the ST.

### **Changes to Evaluation Documents:**

- ST: Updated ST Table 2, CM Series Appliances, to correct typographical errors in the size of the hard disk drives.

### **Testing:**

No updates were made to the hardware and software of the TOE, so no further testing was performed.

### **Conclusion:**

CCEVS reviewed the description of the changes and the analysis of the impact upon security and found them to be minor. The typographical errors in the ST does not impact any of the security functions claimed in the ST.

The CCTL also reported that there were no vulnerabilities associated with any of the models. A vulnerability assessment was conducted on August 20, 2019 and found no vulnerabilities applicable to the TOE.

Therefore, CCEVS agrees that the original assurance is maintained for the product.
