

NDFW iTC allowed-with list for Network Device cPP

Allowed-with list version	2.1r4
Date	8 November 2019

cPP to which this list applies	collaborative Protection Profile for Network Devices
Latest definitive cPP version	V2.1, 24 September 2018
Supporting Document for cPP	Evaluation Activities for Network Device cPP
Latest definitive SD version	V2.1, September 2018 (Document history date: 17 August 2018)

This document contains the lists of allowed packages and PP-Modules to which exact conformance can be claimed in conjunction with the above cPP. It is used in conjunction with the 'CC Conformance' section of the cPP to provide the complete conformance statement for the cPP.

Inclusion of an object on one of these lists does not imply endorsement of the object by the NDFW iTC, nor does it imply that the relevant object has been checked for compliance with the assurance requirements applicable to a PP-Configuration or ST that uses the cPP in conjunction with the relevant object.

Conformance claims from other Protection Profiles (apart from PP-Configurations that may be defined using the PP above and the allowed objects below) are not allowed by ND cPP.

Allowed Packages:

No objects of this type are currently allowed with the cPP.

Allowed PP-Modules:

1.	Object ID:	PP-Module for Stateful Traffic Filter Firewalls
	Object version:	1.3 (27-September-2019)
	Owner:	NDFW iTC (ndfw-itc@ccdbinfo.org)
	Notes:	None
2.	Object ID:	PP-Module for Virtual Private Network (VPN) Gateway
	Object version	1.0 (17 September 2019)
	Owner	NIAP (niap@niap-ccevs.org)
	Notes	None
